Resilience and Innovation in Japan's Economy

Over 50 years, Japan changed from a rapidly-growing economic superstar to a sedate veteran, raising questions about what transitions are needed to succeed as a post-industrial, advanced economy. Japan's experience raises questions about how to adapt to slow-moving and ubiquitous problems such as ageing population, inequality, changing work patterns, and industrial hollowing out, but also about resilience, response to short-term crises and change. For all its specific characteristics there is a lot the world needs to learn from Japan.

Speaker

Jenny Corbett

Project Professor, Tokyo College; Emeritus Professor, ANU; Emeritus Fellow, St Antony's College, Oxford & Adjunct Professor, Griffith Asia Institute, Griffith University

Professor Corbett has taught and researched on Japan's economic performance and policy, on monetary policy and on East Asian financial integration at universities in the UK, Australia and Japan for 40 years. Her major publications include *Rebalancing Economies in Financially Integrating East Asia* (2015), *Laggards and Leaders in Labour Market Reform: Comparing Japan and Australia* (2009), and *Structural Impediments to Growth in Japan* (2003).

2021.
