## The Origin and Rise of *Homo sapiens*

The landscape of human evolution is marked by the diversification of archaic lineages, with various African populations having shaped the emergence of "modern" forms of *Homo sapiens*. Though "Green Sahara" climatic phases facilitated the migration of African populations, the expansion of *Homo sapiens* had little connection to environmental factors. This expansion saw the replacement of local populations and profound cultural transformations, ultimately resulting in the spread of a singular human species that continues to shape our environment today.

2024. **5.9** [Thu.]  
14:00-15:30 JST

Speaker

**Jean-  
Jacques  
HUBLIN**

Chair of  
Paleoanthropology,  
Collège de France

Commentator

**NISHIAKI  
Yoshihiro**

Director,  
The University Museum,  
The University of Tokyo

Moderator

**SHIMAZU  
Naoko**

Professor, Tokyo College

Venue

Zoom Webinar

Language

English (Japanese interpretation)
